

IMPORTANT – The macros and example files are stored in a ZIP file called mixed mediation .ZIP.

In order for the examples to run properly you will need to unzip the files onto your c: drive. You can download ZIPCENTRAL for free at

<http://hemsidor.torget.se/users/z/zcentral/down.html>

In the unzipping process, a folder called mixed mediation will be created and the example files will be located in that folder. Then simply run SAS, open and run the Example.sas file which will point to the c:\mixed mediation folder.
