

SAFETY GLASSES CARE

Cleaning:

- Poor ventilation can cause lenses to fog. Frequent cleansing may be necessary. Keep a soft cloth available for cleaning.
- Eye and face protection equipment that has been previously used should be disinfected before being used by another employee.
- Clean and disinfect your glasses regularly. (Anti-bacterial hand soap will work.)

Storage:

- Goggles should be kept in a case when not in use.
- Safety glasses should be given the same care as one's own glasses, since the frame, nose pads, and temples can be damaged by rough use.
- Safety glasses should be placed in a clean, dust-proof container, such as a box, bag, plastic ziplock bag, or even a cotton sock.
