

Web3 Project Team

03-16-2006

Present: Miriam Barkley, Bo Bodenhamer, Richard Cox, Scott Brewster, Jaysen Buterin, Jason Fleck, Gerardo Garcia, Andrew Marker, Kevin McClain

Absent: Jaysen Buterin, Rob Owens

Recorder: Sherri MacCheyne

Lotus

Todd Sutton announced that ITS is hiring a Lotus Engineer and also a Lotus Administrator. There is a new version of the web client which is supposed to work on the Mac platform as well as windows.

Calendar

Jason Fleck provided a demo of Azorus. Azorus is interested in creating a calendar solution for us free of charge if they can sell it to other clients once they have completed it. We will need to send specs to them.

Concerns:

- Will this run outside of the Azorus framework?
- It would have to be a standalone application?
- Could we display this through Blackboard or a web page?
- Can we build instances?
- Who determines categories and which category an event fits in?
- Is there LDAP capability?

We have enough mandate from WOC that we can go ahead and pursue this without involving them at this juncture.

We need a smaller workgroup to proceed.

Miriam – Public

Jason Fleck – Perspective Students

Kevin McClain – Current Students

Alumni – Laurie Weaver (?)

Barbara Tookey(?)

A word of caution – include the external folks for discussions, but not have them as a working group.

We need to expand on the requirements to give to Azorus to give them a chance to back out.

The next meeting is Thursday, March 30, 2006.
